

Monday, 7:30 am: After weeks of careful planning, you were able to get semiconductors in house for the scheduled run. Production calls: the parts have arrived, but they are not on tape.

The line is down...

OX3[®]

We Move Semiconductors
to the Next Level[®]

Worse still, one of the EPROMs is found to be programmed incorrectly.

Every hour of lost production means \$5,000 out of your budget.

What can you do?

www.OX3.com

Monday, 7:45 am:

You pick up the phone, trying to find a company that can provide all the necessary services, handle your volume, and get the parts back to you within a few hours.

OX3 fits the bill.

A leader and innovator in semiconductor handling, OX3 guarantees rapid delivery whenever it's needed: **same day, weekends, or holidays.**

OX3 will even pick up parts at your facility — within 50 miles of a fulfillment center — and have the finished product back to you, after only 4 hours at its plant.

Guaranteed services are the key. In the fast-paced world of technology, your company's profits (and stock price) rise and fall with its ability to deliver product. OX3 is a business partner that clients count on to deliver finished components quickly — programmed, placed on tape, or both. Most importantly, all of OX3's rapid services are guaranteed to be completed on time.

REELquick® Instant Packaging Service

For services that are too hot to hold for Same-Day processing, we pick up parts at your facility, drive them to our Fulfillment Center, (within 50 miles) and then drive them right back to your waiting production line. What could be faster? If you would rather bring them in yourself, we will start taping once you arrive!

EXpress Same-Day and Next-Day Services

When you need a jump on production, we need your parts by 8:00 AM in order to have them out the door by 5:30 PM on the same day, or next day.

3rd- and 4th-Day Packaging Services

For those services that do not require 24- or 48-hour delivery, we have more affordable 3rd- and 4th-day options.

Standard Delivery Service

If you do not need the parts REELquick®, or guaranteed, consider placing your order on a standard turnaround. The lead-time for this service is usually 5 working days. The pricing can't be beat, unless you choose...

REELaxed™ Packaging Service

When you have the time, our "floating lead-time" service saves you up to 25% on packaging costs! All orders are processed on an unscheduled, "will-call" basis, which usually takes between 14 days and 21 days, but can be longer. Use this service only if you want the cost savings and can afford to wait.

Monday, 2:00 pm:

OX3 just delivered the completed parts — programmed, tape-and-reeled, and ready for automated placement. The line is back up, and you can tell your boss that production will be completed on time.

(You're so relieved, you also decide to send the backlog of components that needed kitting and baking over with OX3's courier.)

OX3 has such a wide variety of carrier tapes in stock that even your odd-form parts are able to be completed using in-house stock. OX3 keeps over 800 different carrier tapes on hand, so most standard parts can be processed immediately.

OX3 has a state-of-the-art kitting and baking center, complete with lock-up cages, oven, and vacuum sealer. Now parts can be delivered to your end customer in the custom quantities that they desire.

OX3 aims to offer every material and service required for the transport, handling, programming and storage of semiconductors.

Our Unique Industry-Leading Services

Carrier Tape Searching at www.ox3.com

The only publicly available list of all open-tool carrier tapes. The site allows you to simply plug in the dimensions of your part to find out instantly if a carrier tape is available for your surface mount device. If one exists, you can order it online without picking up the phone. If not, we'll engineer a custom tool for you. The site also offers cover tapes, take-up reels, and ESD bags for online sale.

Tape and Reel

Two decades of experience in the tape and reeling of surface mount, axial, and radial components.

TRANSFER OPTIONS:

tape to tray, loose to tape, tray to tape, tube to tape. OX3 keeps over 800 different carrier tapes in stock at all times to insure that most customers' needs can be met even in a crisis.

Programming

OX3 has the capability to program any PROM, EPROM, E²PROM, Flash, PLD, CPLD, or Microcontroller.

Kitting

Outsource this service as your costs mushroom, and the pressure for greater profit margins increases.

Baking

Available for moisture contaminated parts.

Lead Form and Trim

OX3 has full lead-conditioning capabilities for the handling of through-hole components and some surface mount devices.

Monday 4:30 pm:
You surf over to www.ox3.com.

Hmm. Maybe outsourcing more often
will make your life easier.

OX3 is quickly becoming the one-stop shop of choice for large and small semiconductor makers, distributors, and electronic contract manufacturers (ECMs) looking to outsource. Dependable service deliveries and a web site with searchable database and online stock make OX3 the perfect strategic partner.

With the electronics industry's continued focus on shortening product cycle times, OX3 can improve your supply chain by allowing you to outsource your back-end packaging and programming.

What Sets Us Apart?

Expedient Customer Service

Our experienced service reps know automated handling inside and out, and are familiar with all necessary technical requirements.

Standardized Pricing

OX3 fixes its service offerings so that you can plan better.

Simple, Smart Part Numbers

The number tells you what you are buying.

Systems Strength

OX3's computer system is linked site-to-site, and is fully-integrated with our web site, allowing us to communicate with you accurately and in a timely manner.
